PARK USER STATISTICS **1994 / 95**

JUN 9 - 1997

LIBRARY

This report contains statistical information on park user activity in Alberta provincial parks. Information on camping, group camping, winter recreation, and day use are included.

The report covers all provincial parks. It includes a brief description of the methodology used to estimate park user activity. A methodology section also describes the value of the 3 wilderness areas and the ecological reserves which are not in place.

In addition, this report provides information covering facilities and services available at parks which show the geographic location of provincial parks, as well as a facilities map specific to Kananaskis.

Alberta Environmental Protection

FOREWORD

The "Park User Statistics, 1994/95" report, covering the period April 1, 1994 to March 31, 1995, is published annually to supply selected information on provincial parks. This publication provides data on the following aspects of park visitation:

Camping Use Statistics

Based on camping permit sales analysis, and/or reasonable estimates of camping use and camper surveys.

Day Use Statistics

Collected through Automatic Traffic Counter readings and traffic surveys.

Group Camping Use Statistics

Based on group use permit sales analysis.

Fixed Roof Accommodation Use Statistics

Kananaskis Country - collected through receipts.

Visitation statistics are reported both at the park or "management unit" level and "area" level (i.e., individual campgrounds, day use areas, group use areas, fixed roof accommodation facilities). Statistics are summarized for provincial parks and recreation areas, and sub-districts within Kananaskis Country. The data collection systems associated with these visitation statistics are discussed in detail in the Introduction Section.

Eight years of historical statistics for camping, group camping, fixed roof accommodation, and day use are included in this report.

In 1994/95 there were 65 provincial parks and 214 provincial recreation areas in the province. All parks, and approximately half of the recreation areas report visitation. Recreation areas that experience marginal visitation do not report use. A methodology to collect data on the visitor use of the 3 wilderness areas and 14 ecological reserves in the province is currently not in place.

In addition to visitation, this report provides information covering facilities and services. Maps (see Appendix) which show the geographic location of provincial parks and recreation areas, as well as a facilities map specific to Kananaskis Country are also included.

Inquiries regarding the statistics reported in this document or a further explanation of the methodology are welcomed, and should be directed to the Visitor Information Systems Coordinator at (403) 427-6791.

Copies of this publication are distributed to other Alberta government agencies, all provincial park agencies in Canada, Parks Canada, and selected libraries (e.g., the Alberta Legislature, Alberta Provincial Archives and the National Library of Canada). In addition, copies of this report are also available on diskette. Inquiries should be directed to:

Alberta Environmental Protection
Natural Resources Service

INTRODUCTION

This report presents Provincial Park Statistics for the period of April 1, 1994 to March 31, 1995. Information is presented for all Provincial Parks and Recreation Areas operated by Natural Resources Service/Parks, at both the park level and "area" level (i.e., individual campground statistics for those parks with multiple campgrounds).

Provincial Park visitation statistics have been reported for approximately the last 30 years. This is the ninth year of publication of this particular report. Since the first publication in 1986/87, the reporting format virtually remained unchanged. The 1991/92 report represented the first major formatting change as part of an effort to make the report more complete and to provide users with as much useful information as possible. The 1993/94 report was dramatically "streamlined" in an effort to make the information more user friendly. The 1994/95 report continues with this approach. Additional changes will be phased in an on-going basis to better suit the current and/or changing needs of the report users, including senior management.

To date, visitation data is not collected for the province's 14 ecological reserves and 3 wilderness areas.

Tables summarizing statistics for camping use, day use, group use, and fixed roof accommodation use statistics are included in this report. Charts are also included to facilitate the comparison of regional totals and previous year provincial comparisons for the same reporting period. It is important to note that individual campground statistics do not include overflow. This statistic is only included at the park level. Also, for those parks which have more than one day use area, the Park level day use statistic total discounts for any multiple visitation (i.e., a day use party who visits more than one day use area in the park).

Selected visitation statistics (e.g., campground turnaways, nights at a specified percent range occupancy for camping, or area nights available/occupied for group use areas) which were reported in the past, are not included. They are, however, available upon request. In addition, visitation data can be further analyzed to meet specific information requirements. These queries should be directed to the Visitor Information Systems Coordinator. Brief descriptions of the data collection methodologies used for each category of use statistics are presented on the next pages.

Camping Statistics Methodology

Camping statistics are based primarily upon information obtained from camping permits. These permits are issued via two systems:

- the Standard Camping Permit system; and
- the Self-Registration Permit (envelope) system.

Standard Camping Permits and associated periodic surveys provide information on occupied campsite nights, average camping party size and accommodation unit usage. This information enables calculation of individual camper nights and accommodation unit nights (see *Glossary Of Terms*).

It is important to note that the average number of accommodation units on a site is based on past peak season (April to September) survey results. Accommodation unit nights are therefore derived for the same period. Off-season (October to March) accommodation unit night figures are equivalent to the occupied campsite nights for the corresponding period. There are no off-season survey statistics available for calculating an average number of accommodation unit nights figure.

Occupied campsite nights are based on the premise that a site is considered occupied when a permit has been issued and that site is occupied by the permittee and at least one camping accommodation unit.

Campground turnaways are recorded each time a camping party is personally turned away because no campsites were available. This information is recorded on a monthly basis and is available upon request.

Self-Registration Permits also provide statistics on occupied campsite nights, and require periodic surveys to provide data on camping party size and accommodation unit usage. Turnaway counts by park staff are not always made owing to the self-administered nature of registration.

It is important to note that, in any self-registration system, non-compliance (i.e., campers not registering) can adversely affect the reliability of camping use statistics. This problem is normally addressed by compliance checks conducted by park staff and the inclusion of non-complying occupied campsite night figures. For provincial recreation areas however, where daily patrols cannot always be done, fewer days are available for non-compliance adjustments resulting in an under-estimation of camping use.

Campground occupancy data are determined from an analysis of:

1. campground capacity,
2. the number of days in July and August,
3. the number of sites affected by closures per day; and
4. the total occupied campsite nights per month.

Refer to the Glossary Of Terms for the formula used in calculating July-August average daily percent occupancy. The average daily percent occupancy for July-August is only reported, since this is considered to be the busiest time of the year for camping.

Average daily percent occupancy for weekends/weekdays by month and average daily percent occupancy by month are however available upon request. Overflow unit night figures, whenever appropriate, and number of campsites for each campground are included in the camping statistics tables.

Backcountry use is collected through a system of user surveys and is reported in the Provincial and Kananaskis Country summary tables as well as in the appropriate District and Sub-District summaries.

Day Use Statistics Methodology

An evaluation of day use data collection procedures in 1981 concluded that the methodology then in use was non-systematic and resulted in day use statistics which were not accurate. Consequently a day use calibration program was implemented in the summer of 1983 and since then, all Provincial Parks have been surveyed as well as the sub-districts within Kananaskis Country.

For the Provincial Parks and the sub-districts within Kananaskis Country, peak season day use statistics are based on figures collected from automatic traffic counters. Adjustments to these counts include determining the ratio of day use vehicles to all other vehicles entering or exiting the park and average party size. It is important to note that the ratio of day use to all other vehicles also discounts for multiple visitation to day use facilities or multiple stops along recreation corridors (e.g., the sub-districts within Kananaskis Country). Both the ratio of day use to all other vehicles and average party size adjustment factors are obtained through a periodic day use calibration survey.

The survey involves stopping traffic on 20 randomly selected days during the peak season to conduct brief interviews. Daily vehicle counts and the survey information are analyzed to yield estimates of day use visitation. When traffic counter readings are not available, the total vehicle counts are supplemented by estimates. This, plus the fact that adjustment factors obtained from past day use calibration surveys are becoming increasingly dated, serves to illustrate the need to ***interpret the day use data with caution.***

It is important to note a significant change to the day use statistics reported for provincial recreation areas. For the majority of provincial recreation areas outside of Kananaskis Country, day use statistics prior to 1989 were calculated using camping figures multiplied by the relative relationship between camping and day use. Beginning in 1989, day use statistics for provincial recreation areas are based upon Automatic Traffic Counter readings as is the case with provincial parks.

The day use methodology for provincial recreation areas adjusts traffic counts for camper traffic (determined from permit sales and estimates of non-compliance and multiple entries/exists) and non-recreational vehicles (from records of park staff) to yield survey information and the estimates of day use visitation. This approach to day use estimation is referred to as the "Residual Method". Due to the change in the collection methodologies at provincial recreation areas, no historical day use comparison is provided prior to the implementation of the residual method.

Group Camping Statistics Methodology

A standard system for collecting group camping use statistics was implemented in 1986. No prior statistics are available. Currently the group use permit system collects information pertaining to group camping unit nights, individual group camper nights, and occupancy. A survey component of the group use permit provides the average number of people in a group unit which is required to calculate individual group camper nights.

Fixed Roof Accommodation Use Statistics Methodology

Occupied room nights and people nights are derived from receipts, summarized and forwarded from Kananaskis Country to Recreation and Protected Areas Division. The number of people nights are based on actual figures as opposed to derived (i.e., using an average party size to calculate people nights).

Historical Comparison

Some of the regional boundaries have changed over the years and as a result, the shifting of regional responsibilities for selected parks has also occurred. It is therefore not possible to compare regional totals, for historical comparison purposes, from one publication to another (the exception being park specific totals). This report should be used to that end.

VISITATION HIGHLIGHTS FOR 1994/95

Total Visitation

Nearly 9 million people visited provincial parks and recreation areas during the 1994/95 Fiscal Year. This represents a decrease of 1.4 percent from 1993/94.

Camping

The total number of campsites in operation during the 1994/95 Fiscal Year was 12,775. This represents a slight decrease of 3.6 percent over the previous year.

The total number of campers increased 9 percent from the 1993/94 Fiscal Year.

The vast majority of camping use (98 percent) took place over the summer (i.e., April 1 to September 30).

Off-season (October 1 to March 31) camping use accounted for 2 percent of total camping. Over half (65 percent) of the total off-season camping use occurred in Kananaskis Country.

Kananaskis Country accounted for the greatest percentage of the total camping use (29.3 percent). The Southern region accounted for 22.8 percent, West Central region accounted for 21.3 percent, East Central region accounted for 17.5 percent, and the Northern region accounted for 9.2 percent of the total camping use. Most regions with the exception of East Central Region experienced an increase in camping from the 1993/94 Fiscal Year.

Group Use

Group camping decreased slightly (1.5 percent) from the 1993/94 Fiscal Year.

Kananaskis Country accounted for the greatest percentage of the total group camping use (31.9 percent). The Southern region accounted for 21.9 percent, West Central region accounted for 18.0 percent, the East Central region accounted for 14.4 percent and Northern region accounted for 13.8 percent of the total group camping use. All regions, with the exception of Kananaskis Country and West Central Region, experienced an increase in group camping from the 1993/94 Fiscal Year. The Southern Region, Northern Region and East Central Regions had increases in group camping from 1993/94, each at 8, 8, and 3 percent respectively.

Day Use

An estimated 7 million day use visitors used provincial parks and recreation areas during the 1994/95 Fiscal Year.

Although the majority (71 percent) of day use visitation took place over the summer, it is important to note that nearly one third of day use visitation (29 percent) took place during the off-season. The majority of winter use however, only occurred at a select number of sites. For example, nearly one third (29 percent) of the total off-season day use occurred at Fish Creek Provincial Park while the Elbow and Highway #40 Sub-Districts in Kananaskis Country made up an additional 21 percent of the total off-season use.

West Central region accounted for nearly half (42.8 percent) of the total day use. Kananaskis Country accounted for 23.7 percent, Southern region accounted for 17.1 percent, East Central region accounted for 11.2 percent, and the Northern region accounted for 5.1 percent of the total day use. The greatest percent increase in day use from 1993/94, occurred in the Southern region where day use increased by 10 percent. All other regions, with the exception of West Central region where day use increased by 1.9 percent, experienced decreases in day use from 1993/94.

Regions (excluding Kananaskis Country)

Approximately 6.5 million people visited areas outside of Kananaskis Country during the 1994/95 Fiscal Year. Of these, the majority were day visitors (81 percent), 18 percent were campers, and 1 percent were group users.

Comparisons of 1994/95 visitation to that of 1993/94 indicates increases in camping (5.6 percent) and group camping (1.6 percent) while day use decreased (3 percent).

The total number of campsites operated during the 1994/95 Fiscal Year decreased by 4.7 percent to 10,212.

Kananaskis Country

Approximately 2.5 million people visited Kananaskis Country during the 1994/95 Fiscal Year. This represents a 3 percent increase over the previous fiscal year. Of these, the vast majority were day users (70.9 percent), 19.3 percent were campers, 8.6 percent stayed in fixed-roof accommodations, and 1.1 percent were group users.

Approximately one third (31.9 percent) of group camping visitation, 29.3 percent of camping visitation, and 23.7 percent of day use visitation during the 1994/95 Fiscal Year took place in Kananaskis Country.

Comparisons of 1994/95 visitation to that of 1993/94 indicate that camping increased by 17.6 percent while group camping and day use decreased by 7.4 and 1.7 percent respectively.

The total number of campsites operated within Kananaskis Country during the 1994/95 Fiscal Year was 2563.

Visitation to Kananaskis Village increased by over 4 percent (4.2 percent) from 1993/94.

GLOSSARY

Camping Use Definitions

Accommodation Unit Nights -

Average number of accommodation units per campsite multiplied by the monthly total of occupied campsite nights.

Average Camping Party Size -

Average number of people per occupied campsite. This is determined for each area by a periodic survey of camping permits.

Average Daily July-August Percent

Campground Occupancy - Total occupied campsite nights for July and August divided by the total number of site nights available for the same period. Resultant figures are expressed as a percentage (i.e., multiplied by 100).

Camping Accommodation Unit - A

ten, a tent trailer, a travel-trailer, a motorhome, a camperized van, or a truck camper.

Campsite Closure - An individual

campsite is considered closed if, for whatever reason, overnight camping is not allowed on that site or camping services are not actively provided. This does not include those instances where a park attempts to focus camping use by controlling access to different parts of a campground depending upon demand.

Individual Camper Nights - Average camping party size multiplied by the number of occupied campsite nights.

Occupied Campsite - A site that is occupied by at least one camping accommodation unit for one night.

Occupied Campsite Night - One site occupied for one night.,

Occupied Room/Tipis Night - one room or tipi (in the case of Sundance Lodge) occupied for one night.

Overflow Unit Night - One camping accommodation unit in an area designated as an overflow area for one night.

Site Nights Available - Campground capacity multiplied by nights per month minus sites closed per month multiplied by nights affected.

Total Occupied Campsite Nights -

The monthly or seasonal totals of the individual daily sums of occupied campsite nights.

Day Use Definitions

Average Day Use Party Size - Average number of people associated with a vehicle entering a Provincial Park or Recreation Area for one day or portion of one day without staying overnight. This is determined by a periodic survey of day users.

Day Use Party Visit - Person(s) in a vehicle entering a Provincial Park or Recreation Area for one day or portion of one day without staying overnight.

Note: In the case of "walk-in" day users, a party is considered to be one or more individuals who appear to enter the park together.

Individual Day Users - Person(s) making a recreational visit to a Provincial Park or Recreation Area for one day or portion of one day without staying overnight.

Group Use Definitions

Group Area Nights Available - Number of group use areas multiplied by nights per month minus group areas closed per month multiplied by nights affected.

Group Camping Area Capacity - Each group camping area has a defined capacity. It is based on the number of accommodation units that can be accommodated in the group camping area.

Group Camping Unit Night - One camping accommodation unit in an area, designated as a group use area for one night.

Group Unit Night - One camping accommodation unit in an area, designated as a group use area for one night.

Group Individual Camper Nights - Average camping party size multiplied by the number of group unit nights.

Fixed Roof Accommodation Use Definitions

Average Daily July-August Percent Fixed Roof Occupancy - Total occupied room nights for July and August divided by the total number of room nights available for the same period. Resultant figures are expressed as a percentage (i.e., multiplied by 100).

Occupied Room/Tipis Night - One room/tipi occupied for one night.

People Nights - Actual number of people per occupied room/tipi.
